USO

EARPHONE

The earphone for museums,
fairs and science centres.

The **USO** one-hand earphone combines high-quality technology with attractive, robust design. From its very first draft the **USO** was designed for intensive use in experience spaces. This is reflected in the name of the product – **USO** meaning “I use” in Spanish – and it has proved itself a hundredfold in the everyday life of museums.

MAGNETIC FIXTURE

The earphone is fixed to its base by a magnet. It is easy to remove in all directions and finds its way back to the starting position even when incorrectly replaced.

AUTO-START FUNCTION

On removing the earphone from its stand an integrated electrical switch (reed switch) automatically sets up the audio- or video-information. This is ended by replacing the earphone.

DESIGN

The **USO** earphone distinguishes itself through its ergonomic and reduced design. Its simplicity permits the listener to concentrate on the exhibits and presentations.

MATERIAL

The basic material of the **USO** earphone is PVC plastic which makes it durable and pleasant to handle. The standard colours are black, dark grey and white. Other colours and materials are available according to prior arrangement.

SERVICE

The m.o.l.i.t.o.r. GmbH offers a two-year guarantee, short delivery times and regularly develops customized models.

Test the USO yourselves. Order a sample.
